

Notificaciones Push

Notificaciones Push

Las notificaciones aumentan la tasa de retención de los jugadores.

- “ the retention curve is 15 to 20% better for players who receive notifications. (Flaregames)”
- “if you start sending push notifications right now, you can increase your 90-day retention by 190%! (Urban Airship)”
- “On iOS, retention rates for players who opt-in for push notifications are 2x higher than those of players who don’t. (Urban Airship)”

También pueden hacer que un usuario vuelva a jugar después de un tiempo.

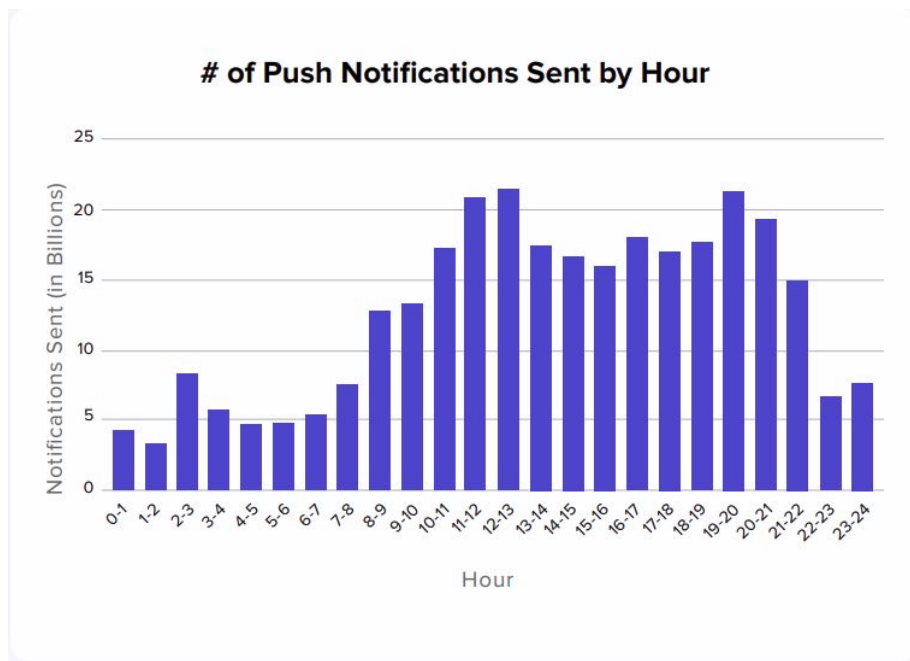

El usuario puede desactivar las notificaciones o dar permisos.

A pesar de los beneficios no hay que abusar de las notificaciones

- Pueden conseguir el efecto contrario
- “75% of Millennials, 67% of Gen Z, and 61% of Baby Boomers say they delete an app because of too many irrelevant notifications. (Business of Apps)”

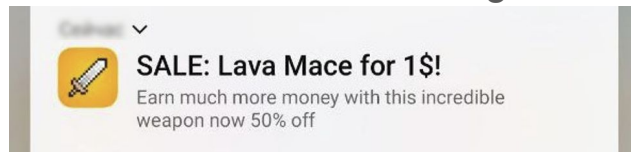

No abusar

- Es importante tener en cuenta al jugador
- Sobrecargarlo con notificaciones puede hacer que le perdamos

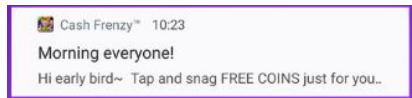

Estrategias

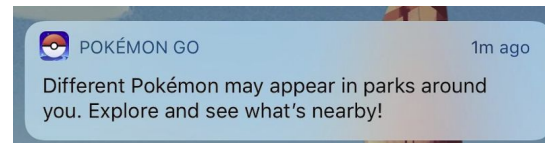

Ofrecer descuentos in-game

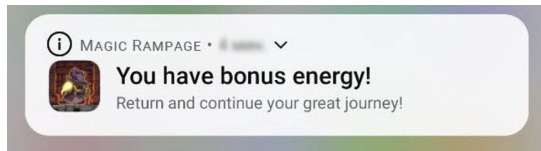

Volver a atraer usuarios con bonificaciones

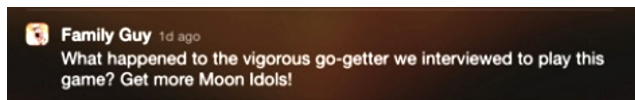

Marcar lugares en juegos geoposicionados

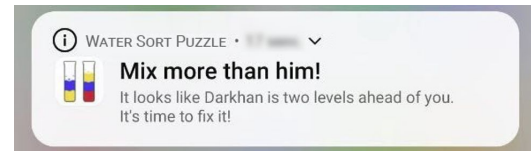

Avisar de que se puede seguir jugando si se usa energía

Hacer las notificaciones parte del juego

Mostrar logros de otros jugadores para "picar" a nuestro usuario

Notificaciones en Android

Hay que estar atento a los cambios de API

API ≥ 33 es necesario pedir permisos

Podemos asociar intents a las notificaciones cuando las creamos

Más info:

- <https://developer.android.com/develop/ui/views/notifications>
- <https://developer.android.com/develop/ui/views/notifications/build-notification>
- <https://developer.android.com/develop/ui/views/notifications/notification-permission#exemptions>

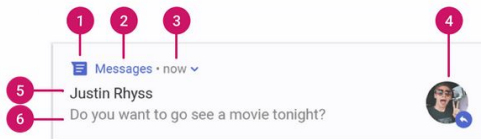

Figure 7. A notification with basic details

The most common parts of a notification are indicated in figure 7 as follows:

- 1 Small icon: This is required and set with `setSmallIcon()`.
- 2 App name: This is provided by the system.
- 3 Time stamp: This is provided by the system but you can override with `setWhen()` or hide it with `setShowWhen(false)`.
- 4 Large icon: This is optional (usually used only for contact photos; do not use it for your app icon) and set with `setLargeIcon()`.
- 5 Title: This is optional and set with `setContentTitle()`.
- 6 Text: This is optional and set with `setContentText()`.

Notificaciones - Creación

Las notificaciones se crean con la clase NotificationCompat.Builder

```
NotificationCompat.Builder builder = new NotificationCompat.Builder( this, CHANNEL_ID)
    .setSmallIcon(R.drawable.notification_icon)
    .setContentTitle( "My notification" )
    .setContentText( "Much longer text that cannot fit one line..." )
    .setStyle( new NotificationCompat.BigTextStyle()
        .bigText( "Much longer text that cannot fit one line..." ))
    .setPriority(NotificationCompat. PRIORITY_DEFAULT) ;
```

Más info:

- <https://developer.android.com/reference/androidx/core/app/NotificationCompat.Builder>
- <https://developer.android.com/develop/ui/views/notifications/build-notification>

Notificaciones - Canales

A partir de Android 8 es necesario crear un canal para las notificaciones

```
// Create the NotificationChannel, but only on API 26+ because
// the NotificationChannel class is new and not in the support library
if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.O) {
    CharSequence name = getString(R.string.channel_name) ;
    String description = getString(R.string.channel_description) ;
    int importance = NotificationManager.IMPORTANCE_DEFAULT;
    NotificationChannel channel = new NotificationChannel(CHANNEL_ID , name, importance);
    channel.setDescription(description) ;
    // Register the channel with the system; you can't change the importance
    // or other notification behaviors after this
    NotificationManager notificationManager = NotificationManagerCompat.from(getApplicationContext());
    notificationManager.createNotificationChannel(channel) ;
}
}
```

Más info:

- <https://developer.android.com/develop/ui/views/notifications/build-notification>
- <https://developer.android.com/training/notify-user/channels?hl=es-419>

Notificaciones - Intents

Podemos asociar intents, por ejemplo para que la notificación lance otra actividad

```
Intent intent = new Intent(getBaseContext() , MiClase.class);
PendingIntent contentIntent = PendingIntent.getActivity(this, 0, intent,
PendingIntent.FLAG_IMMUTABLE | PendingIntent.FLAG_UPDATE_CURRENT);

//Luego añadimos el intent al crear la notificacion
NotificationCompat.Builder builder = new ...

    ...
    .setContentIntent(pendingIntent)
```

```
NotificationManagerCompat notificationManager = NotificationManagerCompat.from(this);

// notificationId is a unique int for each notification that you must define.
notificationManager.notify(notificationId, builder.build());
```

Más info:

- <https://developer.android.com/develop/ui/views/notifications/build-notification>
- [https://developer.android.com/reference/androidx/core/app/NotificationCompat.Builder#setContentIntent\(android.app.PendingIntent\)](https://developer.android.com/reference/androidx/core/app/NotificationCompat.Builder#setContentIntent(android.app.PendingIntent))

Notificaciones en juegos con conexión

Generalmente en juegos tendremos un servidor o servicio encargado de generar las notificaciones.

Por ejemplo podemos usar Firebase.

Esto nos permite enviar notificaciones con promociones, eventos...

Programar notificaciones en local

Es posible programar paquetes de trabajo que se lancen en un periodo determinado → WorkManager y Workers

Antiguamente se usaba
AlarmManager y JobScheduler.

Problema → Cerrar la app hacía que la notificación se perdiera. Esto no pasa si usamos Workers

Más info:
